

Contents

• Dedication	ix
• Acknowledgments	xvii
• Introduction	1
1 • What is Microhydro?	3
Introducing Electricity and Hydraulics	3
About DC	3
About AC	4
Moving Power	5
Electricity and Water	5
Calculating Electrical Characteristics	6
Hydroelectricity	6
Focus on Microhydro	6
Good News, Bad News	8
2 • Assessing Your Energy Needs	11
The Kilowatt Hour	11
Electrical Consumption and Capacity	12
Comparing Service from Different Technologies	13
Rating Photovoltaic Outputs	14
Rating Wind Outputs	15
Rating Microhydro Outputs	15
Different Jobs — Different Power Requirements	15
Assessing Your Requirements, Assessing Your Site	16
How Much and What Type of Power do you Need?	16

Assessing Your Consumption	17
The Consumption Self-Rating Scale	17
How Much Power Do You Need?	18
Interpreting Your Score	19
Introducing the Capacity Self-rating Scale	24
The Capacity Self-rating Scale	25
Off-grid and Needing Some Power	26
How Much is Enough?	26
Do You Need Power in the Winter?	27
If You Need Just a Bit of Power	27
If You Live There Full-time	28
The Magic Number	28
Getting Even More Performance from Your System	28
3 • Assessing Your Site	31
Step 1: Measuring Stream Flow	32
Estimating Flow Rate	32
The Container Method	34
The Weir Method	34
Step 2: Measuring Pressure	36
Using a Pressure Gauge	36
Converting Pressure into Head	37
Measuring Maximum Flow Rate	37
Surveying	37
Using a Water Level	39
Go Figure!	40
Step 3: Creating a Stream Profile	40
Calculating Potential Output	42
Step 4: Calculating Allowable Frictional Loss Rate	43
Go Figure!	44
Step 5: Finding Optimum Flow Rate	44
Go Figure!	45
Step 6: Calculating Power Output	47
Choosing Jets	48
Go Figure!	50

4 • The Appropriate System for You	53
Battery Charging Systems	53
Batteries in Microhydro	53
Charging Batteries	53
Charge Control	55
Producing AC from Batteries with an Inverter	55
Alternators	56
Turbines	57
Impulse Turbines for High Head	57
Low Head Turbines	61
Low Head AC Turbines	62
Other Turbine Solutions	64
Constructing your own Turbine	64
Balance of System Equipment	66
Batteries	66
Battery Charge Control	67
Diversion Loads	67
Inverters	68
Small AC Systems	68
Governing Small AC Systems	69
More Early Practices	73
Modern Solutions	73
AC Systems	74
Efficiency	75
Governing Larger AC Systems	76
AC Turbines	77
Belt Drives	78
Low Head, Multiple-kilowatt AC	78
Transmitting AC Power	79

5 • Getting Started	81
About Pipe	83
Polyethylene (Poly)	83
PVC	83
Sizing Pipe	84
Low Pressure and High Pressure Pipe	84
Microhydro Opportunities	85
Spring Water	85
Existing Pipes	85
Low Head Systems	85
Microhydro Obstacles	86
Very Steep Ground	86
Waterfalls	87
Debris	87
High Water, Low Water	87
Freezing Weather	88
Ice	88
Installing Microhydro Equipment	88
Penstocks	89
Plumbing	91
Valves	92
Pressure Gauge	93
Vaccum Breaker	93
Plumbing in the Powerhouse	94
Intakes	94
6 • Regulations and Incentives	99
The Carrot: Government Incentives for Microhydro	99
Appropriate Incentives for Appropriate Technology	99
Incentives in Canada	100
Incentives in the United States	100
The Stick: Regulations	100
The Process in British Columbia	101
Department of Fisheries and Oceans	101
Department of Water, Land and Air Protection	101

7 • Case Studies	103
Case Study 1: A System with a Long Pipeline	105
The Problem	105
The Solution	106
Replacing this System Today	106
Case Study 2: A System with a Long Transmission Line	108
The Problem	108
The Solution	109
Replacing this System Today	110
Case Study 3: A Simple System	112
The Problem	112
The Solution	113
Replacing this System Today	113
Case Study 4: A Small AC System	115
The Problem	115
The Solution	115
Case Study 5: Upgrading a Small AC System	121
The Problem	121
The Solution	121
Replacing this System Today	124
Case Study 6: A Low-head AC System	126
The Problem	126
The Solution	126
Case Study 7: A Relatively High-output System	128
The Problem	128
The Solution	129
Replacing this System Today	131
